

Secure World Foundation

Committee on the Peaceful Uses of Outer Space, 60th session Agenda Item 8 - Space and Sustainable Development

Statement on the SWF Handbook for New Actors in Space

Mr. Chairman, the Secure World Foundation extends our appreciation to you for your continued excellent guidance of this Committee. We are pleased that this Committee continues to successfully provide effective support to the peaceful uses of outer space, especially for emerging and developing space states. The Secure World Foundation continues to offer its support to the Committee in any way it can.

The Secure World Foundation focuses its work on three primary themes: ensuring the long-term sustainability of outer space activities, fostering the development of sound space policy and law, and enhancing the use of space technology and international cooperation in support of human and environmental security on Earth.

I would like to take this opportunity to remind delegates of a new SWF publication we released in February that we feel is a significant complement to the work of this Committee. In 2014, we announced that the Foundation was beginning the development of the Handbook for New Actors in Space, with the goal of providing new governmental and non-governmental space actors with information to help maximize the potential positive benefits, and minimize the potential negative consequences, of the growing use of space.

The first edition of the SWF Handbook for New Actors in Space has been completed, and is available in both printed and electronic formats. It is the product of a significant amount of hard work by the entire SWF staff, with vital input from dozens of outside experts in this Committee and elsewhere. The Handbook is available electronically at <https://swfound.org/handbook> and printed copies are also available this week.

The Handbook is divided into three chapters. The first chapter provides an overview of the international treaties, legal principles, and institutions, many of which this Committee helped develop. The second chapter discusses national space policy and administrative structures that provide oversight and regulation of governmental and non-governmental space activities. The third chapter covers space operations, and requirements and considerations that should be undertaken during the pre-launch, launch, on-orbit operations, and end-of-life phases of space activities. All three chapters are interdisciplinary in nature, linking information and perspectives across technical, legal, and policy disciplines. Each chapter also includes concrete examples of how existing actors have approached various issues, and highlights differences between existing practices and solutions.

We hope the Handbook will be a useful tool for the entire space community as it continues to expand and innovate. We have already received favorable and useful feedback on the Handbook, and we continue to solicit it. We welcome suggestions from the members of this Committee and all

governmental and non-governmental space actors on how we can improve future editions of the Handbook to best serve the needs of the community. Over the next year, we will also begin work on developing an interactive online complement to the Handbook, which will allow us to provide more details about many of the topics covered in the Handbook. We are actively exploring potential partnerships and sponsorships with governments, academia, and private sector entities to assist in this process. Indeed, outcomes and findings from this body, and of UNISPACE+50, will also be incorporated in the next version of the Handbook in a few years' time.

Mr. Chairman, distinguished delegates, thank you for your time.
