The Space Security Index

The *Space Security Index* is the first and only annual, comprehensive, and integrated assessment of space security. Based on eight indicators of space security, it offers background information and in-depth analysis on key trends and developments in the space field. The project seeks to ascertain trends and developments in space security based on primary, open source research. It also includes an annual assessment of the status of space security based on a consultative process that engages a broad range of stakeholders. The objective of the Space Security Index is to facilitate dialogue on space security challenges and potential responses by providing the necessary facts to shape an important debate that is often unnecessarily polarized. For this year's Executive Summary, please go to <http://www.spacesecurity.org/publications.htm>.

The Space Security Index is a research partnership between several academic, governmental, and non-governmental organizations, who together make up the consortium, [Spacesecurity.org](http://www.spacesecurity.org). Partners include the Institute of Air and Space Law at McGill University, the Secure World Foundation, Project Ploughshares, the Simons Centre for Disarmament and Non-Proliferation Research at the University of British Columbia, and the Space Generation Foundation, in cooperation with the International Security Research and Outreach Programme of the Department of Foreign Affairs and International Trade Canada. For more information, please see www.spacesecurity.org.

Schedule

Welcome and Introduction

Graham Gibbs, Canadian Space Agency/Embassy of Canada, and Victoria Samson, Secure World Foundation
